

Invitation to join our network: **Risk Governance for Engineered Nanomaterials**

Do you want to take part in shaping a novel European governance system for nanotechnology? Have your voice heard by joining our stakeholder group and let's work together to develop solutions to your nanotechnology issues.

As a key stakeholder, you are invited to become part of the NMBP-13 (H2020 Project Cluster) network **Risk Governance for Engineered Nanomaterials**. This network is being developed by three EU projects, [Gov4Nano](#), [NANORIGO](#) and [RiskGONE](#), which have been funded through the NMBP-13 call, to build the future of balanced multi-stakeholder orientated Risk Governance for Engineered Nanomaterials in Europe. Our collective task is to build a robust, long-term Risk Governance Framework and Council to guide the safe and transparent governance of engineered nanomaterials in the context of scientific and societal considerations, including those concerning the natural environment. This will focus on new holistic approaches to risk governance, accounting for socio, ecologic and economic concerns.

As the three projects together, we want to reach out to as many stakeholders in the field of nanotechnology as possibly. Based on our personal history of collaboration, I consider you and your organisation as a valuable partner. Therefore, I would like to invite you to get involved in the development of the Risk Governance Framework and Council and get prepared for a sustainable future.

Please sign up to our database [here](#)

Background:

Europe has led global efforts in advancing the understanding and safety of engineered nanomaterials, for human and environmental safety as products enter our lives.

The European Commission is now focussed on building a Risk Governance Framework for Engineered Nanomaterials, and in support of this aim, are supporting Gov4Nano, NANORIGO and RiskGONE under the banner of the 'NMBP-13' cluster. The foreseen Framework will engage all stakeholders linked to the development and use of nanomaterials and result in a Risk Governance Council, intended for launch by 2022.

Who we are:

Our three projects bring together experts in nanomaterials development and safety from over 80 partner organisations from around the world representing research, industry, advocacy, regulation, standards and policy. Please visit our websites to learn more about our projects.

Benefits to you:

By signing up to our database, you will be regularly updated on the latest developments concerning risk governance of nanomaterials and have opportunities to engage with other stakeholders. You will receive periodic updates on the three projects' progress and achievements, as well as invitations to joint activities and events, such as consultations and closed project workshops. Ultimately, you will guide the development and help build the future of Risk Governance for Engineered Nanomaterials in Europe.

You can choose what you would like to be contacted about and how often.
